PICK-UP TIME **2:00 – 4:30 P.M.**

POST-OPERATIVE CARE

The anesthetic will gradually wear off over the next 12 – 14 hours. Your animal may shiver and act tired during this period. Keep your pet indoors in a warm, quiet area. Water and a small amount of their regular diet may be offered when your pet is able to walk and seems alert.

Activity must be restricted for 12 hours. You are encouraged to keep your pet under close supervision.

If major tooth extractions took place, we recommend soft food for 10 days.

If you think there is a problem of any kind, please call Dr. Bob at 512 336-9663.

If you do not call us and decide to go elsewhere, it will be at your own expense.
